Grace, R. C., & Bragason, O. (2005). Does sensitivity to magnitude depend on the temporal distribution of reinforcement? *Journal of the Experimental Analysis of Behavior*, 83, 169–184.

The equation near the top of page 181 (right-hand column) contained an error. The sentence with the equation should read as follows:

Bragason¹ has proposed a different modification of CCM, the delay ratio model (DRM). The critical difference between the models is that DRM computes T_t as $(V_L + V_R)/2$, where V is the value of the terminal-link schedules, expressed as $(\beta n)/\Sigma[1/(1 + D_i^{a_i})]$. The constant β is a multiplier of the number (n) of delays (D_i) in a distribution; the constant 1 is added to D_i to lessen the value of short delays and to avoid the mathematical problem of 0-s delays; and a_i is a sensitivity parameter of delay.

¹ Bragason, O. (2000). Is choice determined by the arithmetic or harmonic mean of delayed reward? Talk given at a symposium of the Japanese Society for Animal Psychology, Tokyo, Japan.
